

GUNPLA BATTLE: WAR ON THE TABLE 5th EDITION

Created by **Keith Kristoffer B. Quirong**

INTRODUCTION

Gunpla Battle: War on the Table is a tabletop game designed to give new purpose to your Gundam collection. It offers you the chance to pilot a Gundam or lead a squad of units from the Gundam universe into battle.

Are you ready? Grab an opponent, set up your Gunpla, roll for Plavsky Particles, and enjoy Gunpla Battle: War on the Table.

FUNDAMENTAL CONCEPTS

Before learning the steps of the game, it's important to understand the basic concepts.

UNIT

In *Gunpla Battle: War on the Table*, players control the decisions of their pilots, choosing the actions of their units and determining which targets they attack. Each unit in the game is represented by a Gunpla on an action base.

- Gunpla is a portmanteau of “Gundam plastic model.” It is a common term for plastic model kits depicting the vehicles and characters of the Gundam universe created by Bandai.
- Players can use Gunpla in the following scales: SD, SDEX, SDCS, MGSD, SD Gundam World Heroes, 1/144, 1/100, 1/60, and 1/48.
- Players can use Mobile Dolls, Mobile Girls, Figure-rise Standard or 30 Minute Sisters, provided that at least 50% of the parts are from Mobile Suits in any Gundam universe.
- Players can modify the appearance of their Gunpla as they see fit, but it must clearly represent weapons and equipment relative to its traits and abilities.

Units are categorized as Mobile Suit Units, Mobile Armor Units, Giant Units, Combiner Units, Support Units, Extreme Units, Specifically Named Units, and Legendary Units. Sometimes Bandai describes units on their respective product boxes, which can help you determine the category of your unit.

Each unit has corresponding characteristics guided by five stats:

Gilla Cost (Abbreviated to G) - The point value of the unit required for it to be included in the Gunpla Battle List.

Plavsky Particle Activation Cost (Abbreviated to AC) - The number of Plavsky Particles required to activate the unit. This value also represents the action points or the number of actions the unit can perform during its turn.

Melee Attack Value (Abbreviated to MELEE) - The number of dice rolled whenever it performs a Melee attack.

Shooting Attack Value (Abbreviated to SHOT) - The number of dice rolled whenever it performs a Shooting attack.

Hit Points (Abbreviated to HP) - The amount of damage the unit can sustain before being destroyed.

These characteristics are identified in this rule with a horizontal arrangement of:

G / AC / MELEE / SHOT / HP

AC = Plavsky Particle Activation Cost = Number of Actions or Action Point = Number of Weapons to Activate = EX^N

EX^N (Extreme raised to the power of N) - Here, N represents the number of times the extreme unit can activate per round. For each Plavsky particle spent to activate the extreme unit, it gains that number of actions and the number of weapons it can activate until the end of its activation.

- The extreme unit cannot spend more than 3 Plavsky particles per activation.
- The upgrades used during each activation of this extreme unit cannot be used again during the next activation in the same round.

You also have the option to choose a specific field of expertise for a unit instead of its normal stats. This defines how a Gunpla can be significant to the team and reflects the player's preferred fighting style. (See GUNPLA BATTLE UNITS 5th Edition)

TERRAIN TYPE OF UNIT

Units have a specific terrain type, which gives them an advantage in battles that involve that terrain.

1. **SKY** - This Unit can only deploy on Earth terrains.
2. **GROUND** - This Unit can only deploy on Earth terrains.
3. **MARINE** - This Unit can only deploy on Earth terrains.
4. **SPACE** - This Unit can only deploy on Space terrains.
5. **ALL** - This unit can deploy on both Earth and Space terrains.

CLASSIFICATION OF UNIT

In each category, there are classification of Units that the players can use for their Gunpla. They can follow the lore or use their own modified designs, but the most important is to follow the required Gunpla material and compatible scale.

- The maximum number of Upgrades limits the number of Upgrades players can put in their Units. If the value is 0, it means that you cannot put Upgrades on the Unit.

- The default setting for the type of damage of the MELEE and SHOT of the Unit is Physical damage. Units must have an attached projectile weapon; otherwise, its Shooting Attack Value is 0.
- The default setting of the type of damage for MELEE and SHOT of the Unit can be changed from Physical Damage to Beam Damage. Beam effect (like beam Sabers) is required for MELEE; otherwise, its MELEE Attack value is 0.

Each Unit has abilities that make it different from other Units. The abilities are categorized as;

- **[AUTO]:** this tells that the ability is an automatic ability. When a condition or timing is met, the ability activates automatically.
- **[CONT]:** this tells that the ability is a continuous ability. If no conditions are mentioned, this ability is in effect as long as the Unit is on the battlefield.
- **[ACT]:** this tells that the ability is an activated ability. It is an ability that you can activate freely by paying the cost.
- **[INT]:** This indicates an interrupt ability that can be activated during the opponent's turn.

follow the lore or use their own modified designs, but the most important is to follow the required Gunpla material and compatible scale.

ACTION BASE

Your Gunpla must be placed on an Action Base. The relevance of the Action Base will be explained further as the rules are detailed. The Action Base should also indicate the front arc of the unit—either by using stickers as shown in the figure below or by adjusting the figure's head to face the intended direction.

- Players can use only the following Action Bases in the game: Action Base 1, Action Base 2, and Action Base 5.

DICE

To play Gunpla Battle, you will need six-sided dice (abbreviated as D6). Some rules refer to 2D6, 3D6, and so on; in these cases, roll that many D6s and add the results together.

If a rule requires you to roll a D3, roll a D6 and halve the value shown on the die (round fractions up).

For example:

- Roll 1 or 2 = 1
- Roll 3 or 4 = 2
- Roll 5 or 6 = 3
- If a rule requires a D6 roll of, for example, 3 or more, this is abbreviated as 3+.

Dice Rolling Summary:

- **D6** = A six-sided die
- **D3** = A D6 divided by 2 (round up) or use the table above.
- All modifiers (if any) to a dice roll are cumulative.
- Apply modifiers in the following order: division, multiplication, addition, and then subtraction.
- Round fractions up after all modifiers have been applied.
- Dice rolls cannot be modified to less than 1.

Some rules allow you to re-roll a dice roll, which means you roll some or all of the dice again.

- **Re-roll** = Roll the dice again.
- Re-rolls are applied before any modifiers (if any).
- A die can never be re-rolled more than once.
- **Unmodified Dice** = The result of the roll after re-rolls, but before any modifiers (if any).

Roll-offs: Both players roll a D6; the player with the highest result wins. If there is a tie, roll again.

MEASURING DISTANCE

Distances are measured in centimeters (abbreviated as cm) from the closest point of one Gunpla's action base to the closest point of the other Gunpla's action base.

Within

If a rule states it applies "within" a certain distance, it applies at any distance up to and including the specified distance.

Wholly Within

If a rule states it applies "wholly within" a certain distance, the entire action base of the unit or target must be entirely inside the specified distance.

Measuring Tools

Here are the important tools you will need to measure distances:

- **Tape Measure:** A measuring tool that shows measurements in centimeters.

- Action Base 2: This action base is used as a melee range template to check if the units of the players are engaged.
- Melee Range Template = Action Base 2.

Measuring Distances

Distances are measured in centimeters (abbreviated as cm) from the closest point of one Gunpla's action base to the closest point of the other Gunpla's action base.

CARDS

Players must use cards to declare a unit's activation, an upgrade's activation, actions, and reactions in the game. You can customize your own cards, but they must clearly indicate the activation, actions, and reactions.

EXAMPLE OF CARDS

The number of copies of each card depends on your strategy. However, be cautious: if you don't have a card for a specific activation, action, or reaction, you won't be able to declare it.

LIST OF CARDS

Card No.	Card Name	Card Type	Traits
1	Activate Unit	Activation	For units only.
2	Activate Weapon	Activation	For weapon upgrades only. This card can be used for up to 3 weapons.
3	Activate Shield	Activation	For shield upgrades only.
4	Move	Action	
5	Melee Attack	Action	

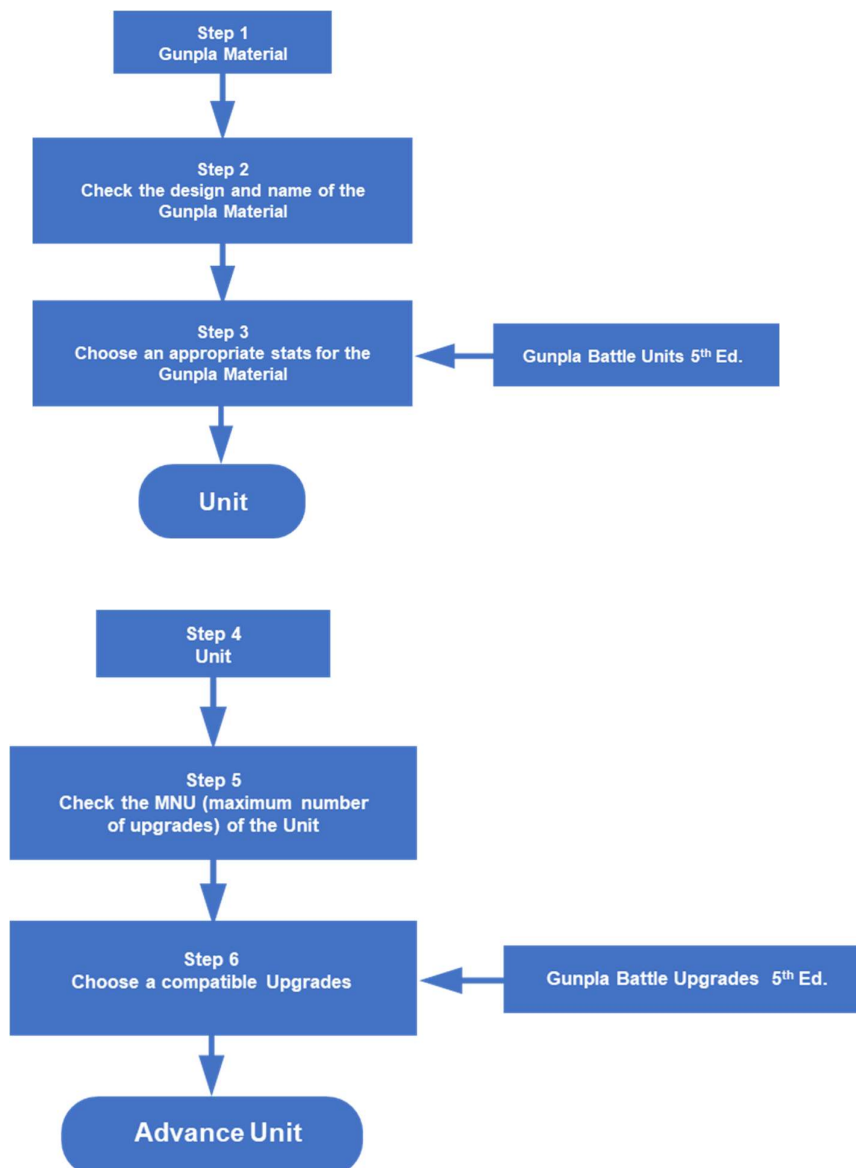

6	Shooting Attack	Action	
7	Sustained	Action	This action card can only be linked to Melee Attack, Shooting Attack, and Disengage actions.
8	Disengage	Action	
9	Throwing Attack	Adv. Action	For Throwing Weapon upgrades only.
10	Ramming Attack	Adv. Action	
11	Charging Attack	Adv. Action	Can only be performed by units with a Melee Weapon upgrade.
12	Fly	Adv. Action	
13	Dive	Adv. Action	
14	Dig	Adv. Action	
15	Fly Through (FT)	Adv. Action	Can only be performed by units with an Altitude token (ALT Token).
16	Move Underwater (MUW)	Adv. Action	Can only be performed by units with a Depth token (DPH Token).
17	Move Underground (MUG)	Adv. Action	Can only be performed by units with an Underground token (UG Token).
18	Transform	Adv. Action	Can only be performed by Combiner Units or units with the ability to perform the Transform Action.
19	Overwatch	Adv. Action	
20	Ultimate Attack	Adv. Action	
21	Evade	Reaction	
22	Guard	Reaction	
23	Do Nothing	Reaction	
24	Perfect Evade	Adv. Reaction	Can only be performed by units with an ALT Token, DPH Token, or UG Token.
25	Perfect Guard	Adv. Reaction	Can only be performed by units with a Shield Upgrade.
26	Intercept	Adv. Reaction	
27	Parry	Adv. Reaction	Can only be performed by units with a Melee Weapon Upgrade.
28	Afterimages	Adv. Reaction	
29	Weapon Sacrifice	Adv. Reaction	Can only be performed by units with a Melee Weapon or Shooting Weapon upgrade.
30	Counter-Strike	Reaction	Can only be performed by units with a Melee Weapon or Shooting Weapon upgrade.

SETUP

Before playing the game, each player chooses their units, determines their stats, and selects any upgrades they want to use. This process is known as creating the Gunpla Battle List (abbreviated as GBL).

A Gunpla Battle List must include at least one unit. This list can be a combination of multiple Mobile Suits, Mobile Armors, and Support Units such as tanks, aircraft, and spacecraft, or it can consist of a single Mobile Suit Unit equipped with weapons and upgrades.

Each player has 10 Gilla Points to build their Gunpla Battle List. Each unit class has a corresponding Gilla cost, and these points can also be spent on upgrades to enhance the unit's performance. A Gunpla Battle List can use fewer than 10 Gilla Points but cannot exceed the 10-point limit. In organized play, the Gilla Points may vary according to the tournament organizer's rules.

After players build their Gunpla Battle List (GBL), they set up the game by resolving the following steps:

1. **Establish Battlefield:** Set up a play area on a table or any flat surface. The battlefield can be one of the following sizes: 2' x 3', 3' x 3', 4' x 4', 3' x 6', or 4' x 6'. This play area is called the Battlefield. Players can agree on a different size if desired. Each player picks an edge of the battlefield to be their starting edge.
2. **Terrain Selection:** Players decide on the terrain of the battlefield. They can choose between SPACE or EARTH. To determine the terrain on Earth, players may either choose or randomly select it by rolling a D6.

If rolling for Earth terrain, a player must choose 6 out of the 9 possible terrains and then roll a D6:

- [1] Desert
- [2] City
- [3] Mountains
- [4] Forest
- [5] Island
- [6] Underwater
- [7] Arctic
- [8] Plains
- [9] Swamp

3. **Place Terrain Pieces:** Players take turns choosing and placing terrain pieces on the battlefield until all pieces are placed.
 - Terrain pieces must not be placed in the deployment area. They must be positioned at least 20 cm away from the table edge, which defines the deployment area.
 - The battlefield can have a maximum of nine (9) terrain pieces.
 - Weather Conditions: Players may choose to include weather conditions on the battlefield. They can either choose a weather condition or roll a D6 to determine it.

**Weather conditions are only applicable if the terrain is Earth (excluding Underwater).
Players must roll a D6 for Earth's weather condition:**

- [1] Hot Weather
- [2] Dry Weather
- [3] Rainy Weather
- [4] Stormy Weather
- [5] Cold Weather
- [6] Snowy Weather

4. **Prepare Other Components:** Ensure measuring tools or tape measures, action bases (used as templates), dice, and tokens are readily available near the battlefield.

GAMEPLAY

Gunpla Battle: War on the Table is played over a series of rounds, each consisting of five phases:

1. **Initiative Phase:** Determine which player has the initiative for the round.
2. **Deployment Phase:** Each player deploys a unit onto the battlefield.
3. **Plavsky Particle Dispersal Phase:** The player with the initiative rolls for Plavsky Particles for the round. Each player then distributes the particles to their units.
4. **Battle Phase:** Players alternately activate their units until all units have been activated for the round.
5. **End Phase:** Once all units have been activated, players remove any unused Plavsky Particles. The new round then begins with the Initiative Phase.

Players continue to resolve rounds, starting with the Initiative Phase, until one player has no units left to deploy on the battlefield.

BATTLE ENDED

The battle will end when the standard time limit of 60 minutes is reached.

Victory is awarded to the player or team who achieves any of the following in hierarchical order:

1. **Hold the Objective:** Control the objective after the time limit.
2. **Obtain the Objective:** Achieve the objective before the time limit.
3. **All Enemy Units Destroyed:** Eliminate all enemy units, whether before or after the time limit.
4. **Retained Gilla Points:** Retain more Gilla Points than your opponent. (This means having fewer Gilla Points lost.)
5. **Inflict More Damage:** Inflict more damage to enemy units than they have inflicted on your units after the time limit.
 - Players should monitor and record the damage inflicted on their units.
 - The total damage inflicted, not the remaining HP of a unit, determines the outcome.
 - A unit that has been restored to full HP is not eligible for this achievement.
 - Sacrificed HP is not counted as inflicted damage.
6. **Have More Units:** Have more units remaining on the battlefield than the opponent after the time limit. (This applies to scenarios with 3 vs. 3, 4 vs. 4, or 5 vs. 5 units.)

In organized play, the time limit may vary according to the tournament organizer's rules.

PHASE 1: INITIATIVE PHASE

This is the phase in which the order of actions is determined. Players roll off for initiative, and the winner is referred to as the Initiating Player. This means that they get to act first in every phase during this round.

- The player who has the initiative can pass their title as the Initiating Player to their opponent before moving to the next phase.

PHASE 2: DEPLOYMENT PHASE

This is the phase in which units are deployed onto the table. Starting with the Initiating Player, units are deployed according to the following rules:

- A player may deploy only one unit per round.
- Units are deployed along their table edge.
- The back side of the action base should be aligned with the edge of their deployment zone.

PHASE 3: PLAVSKY PARTICLE DISPERSAL PHASE

This is the phase that determines how many units each player can activate for the round. The Initiating Player rolls a D6, and each player receives a number of "Plavsky Particles" equal to the result. Players then allocate these particles to their units.

A single unit can be assigned one or more Plavsky Particles. Players may use dice or tokens beside the allocated unit to indicate the number of Plavsky Particles assigned. Any unused Plavsky Particles are lost at the end of the phase.

Example: Player A is the Initiating Player and rolls a 5 during this phase. He is using a single unit with an AC characteristic of 3. He allocates all 5 particles to his unit and places a die showing 5 to indicate that the unit has that many Plavsky Particles.

On the other hand, Player B is using two units, each with an AC characteristic of 2. One of his units has an upgrade that increases its AC characteristic by 1. He allocates 3 Plavsky Particles to the upgraded unit and 2 Plavsky Particles to the other unit.

PHASE 4: BATTLE PHASE

In the Battle Phase, the game is played over a number of turns, depending on the number of units on the battlefield. In each turn, players follow these steps:

1. The Initiating Player activates one of their units first.
2. The second player then activates one of their units.

3. Players continue to alternate activating their units until all units have been activated.
4. Units can only be activated once per round, unless a rule specifically states otherwise.

To activate a unit, players should follow this sequence:

1. Choose one of your units to activate on the battlefield.
2. Place the unit activation card on the table and pay the unit's Plavsky Particle Activation Cost using the allocated Plavsky Particles.
3. If the unit has weapon upgrades that you want to use, place the upgrade card on the table next to the activation card, then pay the Plavsky Particle cost to activate it.
4. Once the unit and its upgrades are activated, declare the actions in sequence using the action cards.
5. After establishing the sequence of actions for the unit (including upgrades), perform the actions in the declared order.

ACTION

The Unit can perform the following actions;

- Move
- Melee Attack
- Shooting Attack
- Disengage
- Sustained Attack
- Sustained Disengage

Units can perform any combination of these actions during a single activation, except for making two or more attacks or performing the disengage action. A unit can have additional attacks if specified in the upgrade's ability; otherwise, it must activate its weapon upgrade to make additional attacks.

Move Action

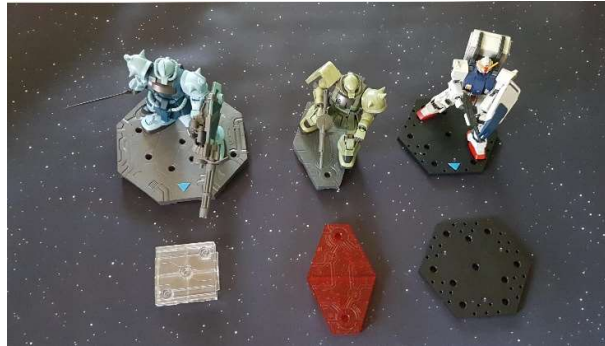

The Move action is guided by another action base of the same type to which the Gunpla is attached. This action base is referred to as the movement template (abbreviated as MT).

- The movement of the unit is up to 2 MT (movement templates).

- A Gunpla on Action Base 1 must use the small square included with the Bandai product as the movement template (modify this small square by cutting its connector part).

The image below shows the movement templates to use for moving units.

Before the active unit performs a Move action, follow these steps:

1. Declare the Move action.
2. Spend 1 action point.
3. Place a Move Action Card on the table.

When performing a Move action, follow these steps:

1. Take the movement template and align it with the side of the same length.
2. Move the Unit to the other end of the movement template.
 - You can change the facing of the Unit during this movement.
 - Movement templates cannot overlap other action bases or terrain pieces during a move.

- Units cannot be placed or end their movement on top of terrain pieces.

Engagement

If you end your movement near an enemy Unit, check the distance between the two Units using the melee range template. If they are within melee range, they are considered Engaged.

- Engaged Units cannot move unless one of the Units performs a Disengage action.
- Engaged Units can perform melee attacks but cannot perform shooting attacks.
- Engaged Units equipped with Weapon Upgrades that include a shooting weapon with a range starting at zero (e.g., 0 to 30) can perform shooting attacks.

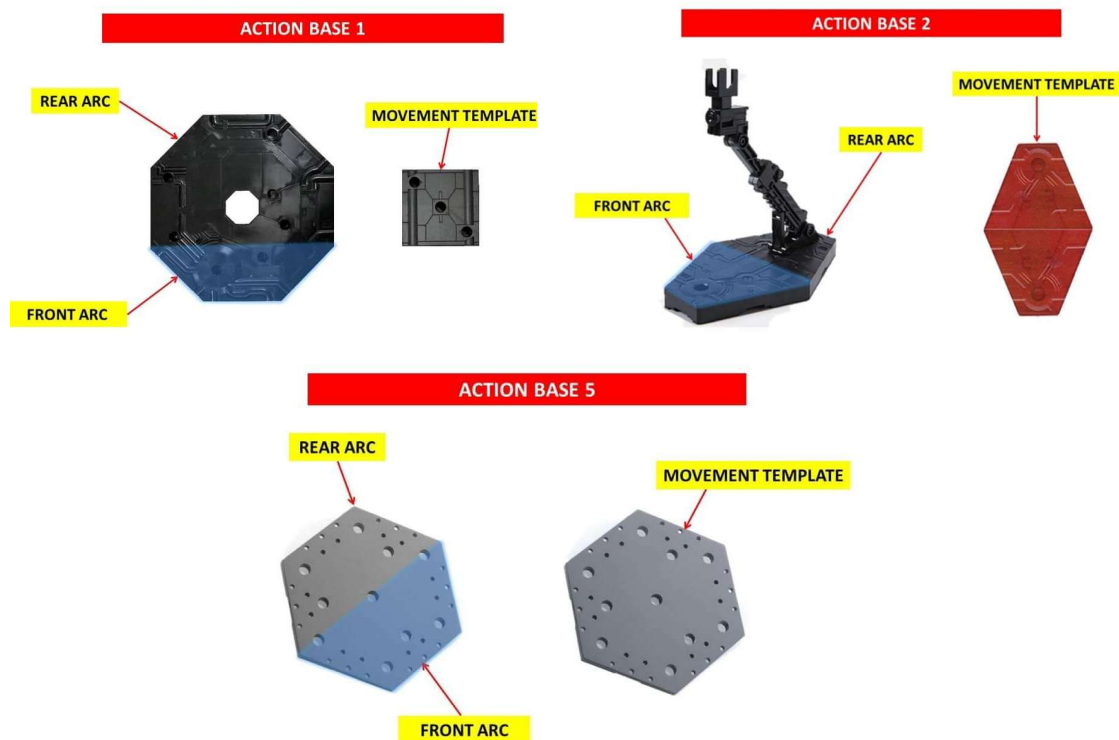

Attack Action

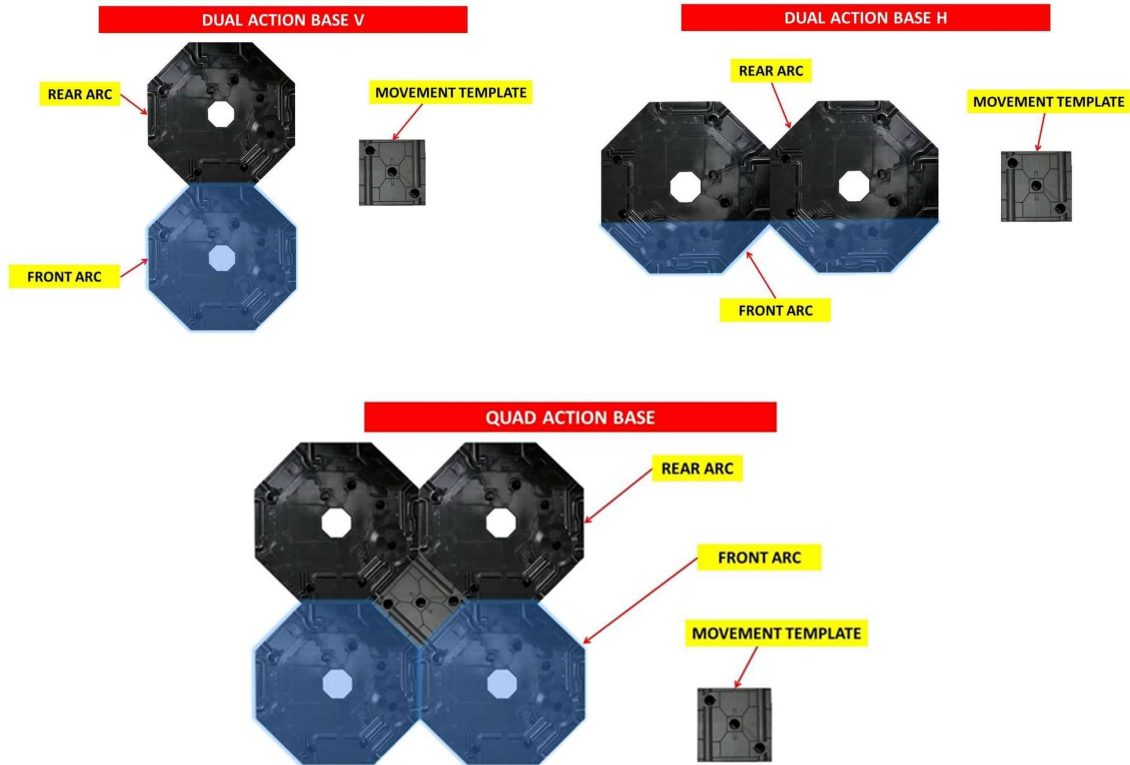

An Attack is an action. A unit or weapon can perform only one attack against a single target per activation. The attack can be categorized as a melee attack, shooting attack, throwing attack, ramming attack, or charge attack. To understand how to perform these attacks, players must first understand arcs and the targeting restrictions for melee and shooting attacks.

- A unit can perform only one Attack Action per turn.

Arcs

Each Unit has 2 arcs, front and rear. Normally, Units can only attack from their front arc.

Melee Attack Action

Melee attacks are close-combat attacks performed by Units equipped with melee weapons, such as swords, axes, hammers, daggers, or scythes, or through unarmed actions like punching, kicking, or hammering enemy Units.

- The Melee Attack action is classified as an Attack Action.
- A unit can perform only one Melee Attack Action per turn.

Melee Attack Targeting Restrictions

To target a Unit with a melee attack, three conditions must be met:

1. The target must be within the attacker's front arc.
2. The target must be within the melee range template.
3. The target must not be obstructed by another Unit or terrain piece.

The attacker measures to the closest point of the target that is within the attacker's front arc and within the melee range template; this measurement is called the Melee Attack Range.

- **Effective Melee Attack Range** means that the attacker and target are engaged and within the melee range template.

Before the active unit or active weapon performs a Melee Attack action, follow these steps:

1. Declare the Melee Attack action.
2. Spend 1 action point.
3. Place the attacker's Melee Attack Action Card on the table.

Performing a Melee Attack

To perform a melee attack, follow these steps:

1. **Declare Target:** Determine which enemy units are within the attacker's front arc. Choose one of those units as the target. The player controlling the targeted unit becomes the defender.
2. **Measure Range:** Measure the target's distance from the attacker using the melee range template. If it is within the unit's effective melee attack range, proceed to step 3; otherwise, cancel the melee attack.
3. **Inquire Reaction:** The attacker must ask the target for its reaction. The defender can then declare its reaction and place the reaction card on the table.
 - If the attacker forgets to ask for a reaction and rolls the attack dice, the defender may still react based on the result of the roll.
4. **Melee Attack Dice:** The attacker rolls melee attack dice equal to the melee attack value listed on the attacking unit's or melee weapon's stats. The defender may then use their abilities to modify the melee attack dice, followed by the attacker.
 - A successful hit value for a melee attack is 5+.
 - "5+" means the dice result must be 5 or higher.
 - The attacker gains 1 additional melee attack die if attacking an enemy unit's rear arc.
 - The attacker must be wholly within the enemy unit's rear arc to gain the additional melee attack die.
5. **Performing Reaction:** The defender performs the declared reaction.
6. **Neutralize Results:** This step is necessary if the defending player declared an evade or guard reaction. Each evade die or guard die that shows a result of 4+ cancels one successful hit result, and the die is removed from the dice pool.
 - "4+" means the result must be 4 or higher.

7. **Deal Damage:** The target suffers damage equal to the number of remaining successful hits.
- For a unit, each successful hit equates to 1 damage.
 - For a melee weapon, each successful hit equates to 1 damage, though some melee weapons may have different damage values.
8. **Aftermath:** If the target's HP characteristic drops to 0, it is destroyed and removed from the battlefield. Any abilities that trigger after an attack are then resolved.

Shoot Attack Action

Shooting attacks are ranged attacks performed by units equipped with shooting weapons, such as pistols, rifles, shotguns, machine guns, Gatling guns, bazookas, cannons, missiles, or Vulcans. The unit cannot perform this action if it does not have shooting weapons.

- The Shooting Attack action is classified as an Attack Action.
- A unit can perform only one Shooting Attack Action per turn.

Shooting Attack Targeting Restrictions

To target units, four conditions must be met:

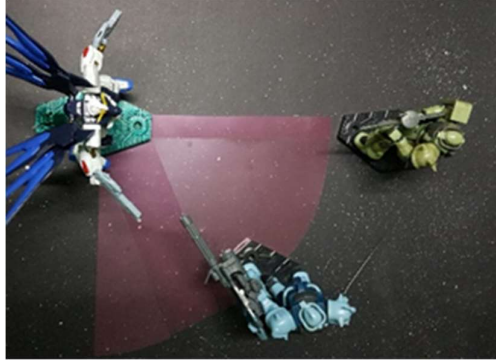

1. The target must be within the attacker's front arc.
2. The target must be within shooting attack range.
3. No enemy units should be within melee range of the attacker.
4. The target must not be blocked by other units or terrain pieces.

The attacker measures to the closest point of the target that is within the attacker's front arc, has line of sight, and is within the effective shooting attack range. This measurement is called the shooting attack range.

- **Effective Shooting Attack Range:** 20 to 50 cm. This means the target must be at least 20 cm away from, but within 50 cm of, the attacker.

- If the defender's base is partially within 20 cm of the attacker, cancel the shooting attack.

Example: Strike Freedom cannot attack the Gouf Custom as the latter is within 20cm. The Zaku II however is outside this minimum effective range but within the 50cm maximum range, therefore can be targeted with a shooting attack.

- Players cannot pre-measure the shooting attack range before or after declaring a shooting attack.

Before the active unit or active weapon performs a Shooting Attack action, follow these steps:

1. Declare the Shooting Attack action.
2. Spend 1 action point.
3. Place the attacker's Shooting Attack Action Card on the table.

Performing a Shooting Attack

To perform a shooting attack, units should follow these steps:

1. **Declare Target:** Determine which enemy units are within the attacker's front arc. Choose one of those units as the target. The player controlling the targeted unit becomes the defender.
2. **Measure Range:** Measure the target's distance from the attacker using a measuring tool. If the target is within the unit's effective shooting attack range, proceed to step 3; otherwise, cancel the shooting attack.
3. **Inquire Reaction:** The attacker must ask the target for its reaction. The defender can then declare its reaction and place the reaction card on the table.
 - If the attacker forgets to ask for a reaction and rolls the attack dice, the defender may still react based on the result of the roll.

4. **Shooting Attack Dice:** The attacker rolls shooting attack dice equal to the shooting attack value listed on the attacking unit's or shooting weapon's stats. The defender may then use their abilities to modify the shooting attack dice, followed by the attacker.
 - A successful hit value for a melee attack is 4+.
 - "4+" means the dice result must be 4 or higher.
 - The attacker gains 1 additional shooting attack die if attacking an enemy unit's rear arc.
 - The attacker must be wholly within the enemy unit's rear arc to gain the additional shooting attack die.
5. **Performing Reaction:** The defender performs the declared reaction.
6. **Neutralize Results:** This step is necessary if the defending player declared an evade or guard reaction. Each evade die or guard die that shows a result of 4+ cancels one successful hit result, and the die is removed from the dice pool.
 - "4+" means the result must be 4 or higher.
7. **Deal Damage:** The target suffers damage equal to the number of remaining successful hits.
 - For a unit, each successful hit equates to 1 damage.
 - For a melee weapon, each successful hit equates to 1 damage, though some melee weapons may have different damage values.
8. **Aftermath:** If the target's HP characteristic drops to 0, it is destroyed and removed from the battlefield. Any abilities that trigger after an attack are then resolved.

Sustained Attack Action

A sustained attack is a concept where the attacker focuses on accuracy to increase the likelihood of hitting the target. It allows the attacker to re-roll missed attack dice, making the attack more accurate.

- Sustained Melee Attack: Costs two action points.
- Sustained Shooting Attack: Costs two action points.

Before the active unit or weapon performs a Sustained Attack action, follow these steps:

1. Declare the Sustained Melee Attack or Sustained Shooting Attack action.
2. Spend 2 action points.
3. Place the attacker's Melee Attack Action Card and Sustained Action Card on the table.

Disengage Action

Disengage is an action that allows engaged units to move up to two movement templates.

- A unit can perform only 1 Disengage Action per round.

Before the active unit performs a Disengage action, follow these steps:

1. Declare the Disengage action.
2. Spend 1 action point.
3. Place Disengage Action Card on the table.

To disengage a unit, follow these steps:

1. Roll a Disengage Die (D6). If the result is 4+, the disengage is successful; otherwise, the disengage fails.
 - "4+" means the result must be 4 or higher.
2. The player then moves the unit up to two movement templates.

Sustained Disengage Action

Sustain Disengage allows the player to re-roll the failed disengage die of their Unit.

- A unit can perform only 1 Sustained Disengage Action per round.
- Sustained Disengage: Costs two action points.

Before the active unit or weapon performs a Disengage action, follow these steps:

1. Declare the Sustained Disengage action.
2. Spend 2 action points.
3. Place the Disengage Action Card and Sustained Action Card on the table.

ADVANCED ACTION

Advanced Actions are tactical maneuvers that give players advantages in controlling the battlefield. They have specific conditions that must be met for their execution.

- Units can perform only **one advanced action per turn**.

The Unit can perform the following advanced actions;

- Throwing Attack
- Ramming Attack
- Charging Attack
- Fly
- Dive
- Dig
- Fly Through (FT)
- Move Underwater (MUW)
- Move Underground (MUG)
- Transform
- Overwatch
- Ultimate Attack

Throwing Attack Action

Throwing Attack is an advanced action that allows a unit to throw its throwing weapon. Players must spend their unit's action point to perform the Throwing Action and then follow the instructions provided by the throwing weapon's ability.

- The Throwing Attack action is classified as an Attack Action.
- A unit can perform only one Throwing Attack Action per turn.
- A Throwing Action is considered as an attack action.
- A unit cannot perform Throwing Attack actions in underwater terrain.

Before the active unit performs a Throwing Attack action, follow these steps:

1. Declare the Throwing Attack action.
2. Spend 1 action point.
3. Place a Throwing Action Card on the table.

Ramming Attack Action

A Ramming Attack is an advanced action that deals 1 Physical Damage to another unit or terrain piece at the end of the attack.

- If it damages the terrain piece, the attacking Unit is pushed away 1 movement template.
- If it damages another unit, the damaged unit is pushed away 1 movement template.
- Players must spend their unit's action points to perform the Ramming Attack.
- The Ramming Attack action is classified as an Attack Action.
- A unit can perform only one Ramming Attack Action per turn.
- A unit that is engaged cannot perform a Ramming Attack.

Before the active unit performs a Ramming Attack action, follow these steps:

1. Declare the Ramming Attack action.
2. Spend 1 action point.
3. Place a Ramming Attack Action Card on the table.

To perform Ramming Attack:

Roll a Ramming Die (D6). If the result is 3 or less, the Ramming Attack fails. On a roll of 4 or higher, move the attacker up to 2 movement templates. If the attacker ends up within melee range of the defender (Unit or Terrain Piece), deal 1 Physical damage and push the defender (Unit or Terrain Piece) away from the attacker by 1 movement template.

Charging Attack Action

A Charging Attack is an advanced action for a unit equipped with a melee weapon upgrade. The unit must spend an action point and declare this action to activate the ability of the melee weapon.

- The Charging Attack action is classified as an Attack Action.
- A unit can perform only one Charging Attack Action per turn.
- A unit that is engaged cannot perform a Charging Attack.

Before the active unit performs a Charging Attack action, follow these steps:

1. Declare the Charging Attack action.
2. Spend 1 action point.
3. Place a Charging Attack Action Card on the table.

To perform Charging Attack:

1. Roll a Charging Die (D6). If the result is 3 or less, the Charging Attack fails.
2. On a roll of 4 or higher, the equipped unit moves according to its current movement templates.
3. Proceed with the ability's instructions if the specified condition is met.

Fly Action

The Fly Action is an advanced action that can only be performed by units with a terrain type of SKY, SPACE, or ALL.

- Unit with a terrain type of SKY and ALL cannot perform Fly action Underwater and in Space terrain.
- Unit with a terrain type of SPACE cannot perform Fly action on Earth terrain.
- Unit with a terrain type of ALL can perform Fly action on Space Terrain.
- Fly action costs one action point to units with a terrain type of SKY.
- Fly action costs one action point to units with a terrain type of SPACE.
- Fly action costs two action points to units with a terrain type of ALL.
- The Fly Action cannot be performed if the unit is engaged.

Before the active unit with a terrain type of SKY or SPACE performs a Fly Action to fly upward, follow these steps:

1. Declare the Fly action.
2. Spend 1 action point.
3. Place a Fly Action Card on the table.

Before the active unit with a terrain type of ALL performs a Fly Action to fly upward, follow these steps:

1. Declare the Fly action.
2. Spend 2 action points.
3. Place a Fly Action Card on the table.

Before the active unit with a terrain type of SKY, SPACE, or ALL performs a Fly Action to fly downward, follow these steps:

1. Declare the Fly action.
2. Spend 1 action point.
3. Place a Fly Action Card on the table.

To perform a Fly Action to fly upward: Place 1 ALT token for each Fly Action declared to fly upward. The unit cannot have more than 2 ALT tokens.

- ALT token is an Altitude Token.
- An ALT token represents a vertical distance of 0 to 50 cm from the reference horizontal plane.
- The unit is considered to be within 50 cm above the surface if it has 1 ALT token. This means that the Unit is on the Altitude 1.
- The unit is considered to be within 100 cm or more above the surface or plane if it has 2 ALT tokens. This means that the Unit is on the Altitude 2.

To perform a Fly Action to fly downward: Remove 1 ALT token for each Fly Action declared to fly downward.

When a unit with ALT token takes damage:

1. After the unit takes any type of damage from an attack, remove 1 ALT token.
2. If the last ALT token is removed, roll a D6. On a roll of 3 or lower, the unit crashes down and takes 1 Fire damage. On a roll of 4 or higher, nothing happens.

Rules in Altitude:

1. This unit with ALT token follows the rule: "I see you, you see me."
"I see you, you see me" means that the unit with the ALT Token and the unit without it can see each other, even if they are behind a terrain piece. They don't need Line of Sight (LOS) when attacking each other. However, the unit with the ALT Token does not benefit from cover, unlike the unit without it.
2. The unit and its enemy unit cannot perform Melee Attack or Sustained Melee Attack actions against each other if they are at different altitudes, even if both are within melee range.
3. The unit and its enemy unit can perform Melee Attack or Sustained Melee Attack actions against each other, even if they are at different altitudes, provided both have a melee range with a maximum of 50 cm or 70 cm.
4. The unit and its enemy unit can perform Throwing Attack, Shooting Attack, or Sustained Shooting Attack actions against each other, even if they are at different altitudes, or if both are within melee range but at different altitudes.
 - This rule applies only to a unit with **one ALT token** against a unit without an ALT token.
 - This rule applies to weapon upgrades with a maximum range of 50 cm or 70 cm.
 - This rule does not apply to weapon upgrades with a maximum shooting range of 100 cm or more and one ALT token.
 - This rule applies to weapon upgrades with a maximum shooting range of 100 cm or more, if it has **two ALT tokens**.

5. All effective shooting attack ranges start at 0 if the unit and its targets are at different altitudes.
6. A Remote Weapon can be deployed with the same number of ALT tokens as its main unit.
7. Unit cannot perform Ramming Attack or Charging attack action if the target is at different altitudes.
8. Units with an ALT token and their enemy units with a DPH or UG token cannot perform any attack action against each other.

Dive Action

The Dive Action is an advanced action that can only be performed by units with a terrain type of MARINE or ALL.

- A unit with the MARINE terrain type can perform Dive Actions in Water surfaces and Underwater terrain.
- A unit with the ALL terrain type can perform Dive Actions in water surfaces and underwater terrain.
- Dive action costs one action point to units with a terrain type of MARINE.
- Dive action costs two action points to units with a terrain type of ALL.
- The Dive Action cannot be performed if the unit is engaged.

Before the active unit with the MARINE terrain type performs a Dive Action to submerge, follow these steps:

1. Declare the Dive action.
2. Spend 1 action point.
3. Place a Dive Action Card on the table.

Before the active unit with a terrain type of ALL performs a Dive Action to submerge, follow these steps:

1. Declare the Dive action.
2. Spend 2 action points.
3. Place a Dive Action Card on the table.

Before a unit with the MARINE or ALL terrain type performs a Dive Action to surface on the water, follow these steps:

1. Declare the Dive action.
2. Spend 1 action point.
3. Place a Dive Action Card on the table.

To perform a Dive Action to submerge: Place 1 DPH token for the declared Dive Action. The unit cannot have more than 2 DPH tokens.

- A DPH token represents depth.
- A DPH token indicates a depth of 0 to 50 cm.
- The unit is considered to be within 50 cm below the surface if it has a DPH token, meaning the unit is submerged underwater.

To perform a Dive action to Surface on the water: Remove 1 DPH token for each Dive Action declared to surface on the water.

When a unit with DPH token takes damage:

1. After the unit takes any type of damage from an attack, remove 1 DPH token.
2. If a DPH token is removed, roll a D6. On a roll of 3 or lower, the unit takes 1 Water damage. On a roll of 4 or higher, nothing happens.

Rules in Depth:

1. This unit with ALT token follows the rule: "I see you, you see me."
"I see you, you see me" means that the unit with the DPH Token and the unit without it can see each other, even if they are behind a terrain piece. They don't need Line of Sight (LOS) when attacking each other. However, the unit with the DPH Token does not benefit from cover, unlike the unit without it.
2. The unit and its enemy unit cannot perform Melee Attack or Sustained Melee Attack actions against each other if they are at different depths, even if both are within melee range.
3. The unit and its enemy unit can perform Melee Attack or Sustained Melee Attack actions against each other, even if they are at different depths, provided both have a melee range with a maximum of 50 cm or 70 cm.
4. The unit and its enemy unit can perform Shooting Attack or Sustained Shooting Attack actions against each other, even if they are at different depths, or if both are within melee range but at different depths.
 - This rule applies only to a unit with **one DPH token** against a unit without an DPH token.
 - This rule applies to weapon upgrades with a maximum range of 50 cm or 70 cm.
 - This rule does not apply to weapon upgrades with a maximum shooting range of 100 cm or more and one DPH token.
 - This rule applies to weapon upgrades with a maximum shooting range of 100 cm or more, if it has **two DPH tokens**.
5. All effective shooting attack ranges start at 0 if the unit and its targets are at different depths.

6. Unit cannot perform Ramming Attack or Charging attack action if the target is at different depths.
7. Units with an DPH token and their enemy units with ALT or UG token cannot perform any attack action against each other.

Dig Action

The Dig Action is an advanced action that can only be performed by units with a terrain type of GROUND or ALL equipped with Drill Hand or Digging Claw built-in weapon upgrades.

- Units with the GROUND or ALL terrain type that are equipped with Drill or Digging Claw built-in weapon upgrades can only perform a Dig Action in City, Desert, Swamp, Forest, Plains, and Mountain terrains.
- The Dig Action costs one action point for units with the GROUND terrain type that are equipped with Drill or Digging Claw built-in weapon upgrades.
- The Dig Action costs two action points for units with the ALL terrain type that are equipped with Drill or Digging Claw built-in weapon upgrades.
- The Dig Action cannot be performed if the unit is engaged.

Before the active unit with the GROUND terrain type performs a Dig Action to burrowed, follow these steps:

1. Declare the Dig action.
2. Spend 1 action point.
3. Place a Dig Action Card on the table.

Before the active unit with a terrain type of ALL performs a Dig Action to burrow, follow these steps:

1. Declare the Dig action.
2. Spend 2 action points.
3. Place a Dig Action Card on the table.

Before a unit with the GROUND or ALL terrain type performs a Dig Action to surface, follow these steps:

1. Declare the Dig action.
4. Spend 1 action point.
5. Place a Dig Action Card on the table.

To perform a Dig Action to burrow: Place 1 UG token for the declared Dive Action. The unit can only have 1 UG token.

- A UG token represents underground.
- A UG token indicates that the bottom of burrow is 0 to 50 cm from surface of the ground.

- The unit is considered to be within 50 cm below the surface if it has a UG token, meaning the unit is beneath the surface of the ground or underground.

To perform a Dig Action to surface: Remove 1 UG token for each Dig Action declared.

When a unit with DG token takes damage:

1. After the unit takes any type of damage from an attack, remove 1 UG token.
2. If a UG token is removed, roll a D6. On a roll of 3 or lower, the unit takes 1 Earth damage. On a roll of 4 or higher, nothing happens.

Rules in Underground:

1. This unit with ALT token follows the rule: "I see you, you see me."
"I see you, you see me" means that the unit with the UG Token and the unit without it can see each other, even if they are behind a terrain piece. They don't need Line of Sight (LOS) when attacking each other. However, the unit with the UG Token has cover, unlike the unit without it.
2. The unit and its enemy unit cannot perform Melee Attack or Sustained Melee Attack actions against each other if they are at different surfaces, even if both are within melee range.
3. The unit and its enemy unit can perform Melee Attack or Sustained Melee Attack actions against each other, even if they are at different surfaces, provided both have a melee range with a maximum of 50 cm or 70 cm.
4. The unit and its enemy unit can perform Throwing Attack, Shooting Attack, or Sustained Shooting Attack actions against each other, even if they are at different surfaces, or if both are within melee range but at different surfaces.
 - This rule applies only to a unit with **one UG token** against a unit without an UG token.
 - This rule applies to weapon upgrades with a maximum range of 50 cm or 70 cm.
 - This rule does not apply to weapon upgrades with a maximum shooting range of 100 cm or more and one UG token.
 - This rule applies to weapon upgrades with a maximum shooting range of 100 cm or more if the weapon has 1 UG token and the enemy unit has 1 ALT token.
5. All effective shooting attack ranges start at 0 if the unit and its targets are at different surfaces.
6. Unit cannot perform Ramming Attack or Charging attack action if the target is at different surfaces.
7. Units with a UG token and their enemy units with a DPH token or 2 ALT tokens cannot perform any attack actions against each other.

Fly Through Action (FT)

The Fly Through Action is an advanced action that can only be performed by units with ALT tokens.

Before an active unit performs a Fly Through Action, follow these steps:

1. Declare the Fly Through action.
2. Spend 2 action points.
3. Place a Fly Through Action Card on the table.

To perform a Fly Through Action:

Roll a Fly Through Die (D6). If the result is 3 or less, the Fly Through action fails. On a roll of 4 or higher, place the unit within 0 to 20 cm of its previous location.

- The Fly Through action ignores engagement.
- The unit performing the Fly Through action can move over another unit within its melee range using a measuring device.
- If there is no open area to place the unit on the table, the Fly Through action fails.

Move Underwater Action (MUW)

The Move Underwater Action is an advanced action that can only be performed by units with DPH tokens.

Before an active unit performs a Move Underwater Action, follow these steps:

1. Declare the Move Underwater action.
2. Spend 2 action points.
3. Place a Move Underwater Action Card on the table.

To perform a Move Underwater Action:

Roll a Move Underwater Die (D6). If the result is 3 or less, the Move Underwater action fails. On a roll of 4 or higher, place the unit within 0 to 20 cm of its previous location.

- The Move Underwater action ignores engagement.
- The unit performing the Move Underwater action can move over another unit within its melee range using a measuring device.
- If there is no open area to place the unit on the table, the Move Underwater action fails.

Move Underground Action (MUG)

The Move Underground Action is an advanced action that can only be performed by units with UG token.

Before an active unit performs a Move Underground Action, follow these steps:

1. Declare the Move Underground action.
2. Spend 2 action points.
3. Place a Move Underground Action Card on the table.

To perform a Move Underground Action:

Roll a Move Underground Die (D6). If the result is 3 or less, the Move Underground action fails. On a roll of 4 or higher, place the unit within 0 to 20 cm of its previous location.

- The Move Underground action ignores engagement.
- The unit performing the Move Underground action can move over another unit within its melee range using a measuring device.
- If there is no open area to place the unit on the table, the Move Underground action fails.

Example of moving over another unit using the Fly Through, Move Underwater or Move Underground action.

Transform Action

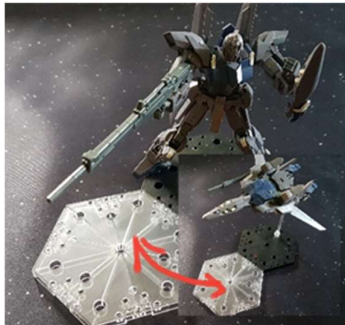

Transform Action is an advanced action that can only be performed by units with the ability to transform into another unit or combine with other units to form a new unit.

Before an active unit performs a Transform Action, follow these steps:

- Declare the Transform Action.
- Spend 1 action point.
- Place a Transform Action Card on the table.

To perform a Transform Action with a unit, follow these steps:

1. Use a movement template as a position template for transforming the unit.

2. Place the position template on any side of the unit's action base.
 - The position template must not overlap another unit, remote weapons, mine token, or terrain piece.
 - If the position template is hindered, the Transform Action cannot be performed.
3. Remove the unit that performs this action, then replace it with another unit on the same side where the unit was removed.
 - The unit can change its facing during replacement.
 - An engaged unit cannot perform a Transform Action.

Overwatch Action

Overwatch is an advanced action that threatens enemy units from a distance.

Before an active unit performs an Overwatch Action, follow these steps:

1. Declare the Overwatch Action.
2. Spend 1 action point.
3. Place an Overwatch Action Card on the table.

To perform Overwatch, place a round token within the effective shooting attack range of the unit.

The unit that performs Overwatch is called the Watcher.

- The round token is called the Overwatch Token.
- The Overwatch Token has a diameter of 30 mm or less.
- The Overwatch Token has an activation radius of 10 cm.
- The Overwatch Token ignores the ALT, DPH, and UG tokens of the unit.

How Does the Overwatch Token Work?

Whenever the movement template or action base of an enemy unit moves closer to the base of the Overwatch Token, follow these steps:

1. Check the distance. If it's within the activation radius of the Overwatch Token, interrupt the movement of the enemy unit.
2. Remove the Overwatch Token and deal D3 unavoidable damage to the enemy unit.
3. After dealing the unavoidable damage, the enemy unit may continue its movement.

Rules of the Overwatch Action

- If the Watcher performs an action or becomes engaged, remove the Overwatch Token.
- If Overwatch is declared first, players cannot declare another action.
- An engaged unit cannot perform an Overwatch Action.
- At the End Phase, remove the Overwatch Token.

Ultimate Attack Action

Ultimate Attack is an advanced action that can only be acquired by purchasing it in the *Gunpla Battle Upgrades* 5th edition.

Before an active unit performs an Ultimate Attack Action, follow these steps:

1. Declare the Ultimate Attack Action.
2. Spend the required power gauge token.
3. Place the Ultimate Attack Action Card on the table.

To perform the Ultimate Attack action, follow the instructions provided by the purchased Ultimate Attack upgrade. For more details, refer to the *Gunpla Battle Upgrades* 5th edition.

REACTION

Whenever a unit is targeted by an attack, it has the opportunity to declare a reaction. Unlike actions that require Plavsky Particles, reactions are free, but only one reaction can be declared for each attack. The available reactions are Evade, Guard, or Do Nothing.

The reactions a unit can perform are:

- **Evade**
- **Guard**
- **Do Nothing**

Evade

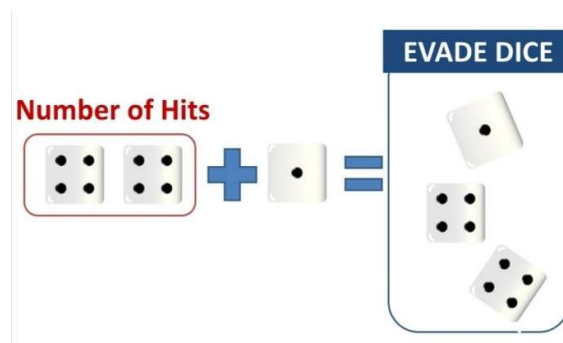

Evade is a reaction that prevents an attack from dealing damage to a unit.

If your opponent asks for your reaction or is about to perform the attack action, follow these steps:

1. Declare the Evade reaction.
2. Place an Evade Reaction Card on the table.

After the attacker's attack dice are rolled and modified, the defender rolls a number of dice equal to the number of successful hits from the melee or shooting attack, plus one additional die. For each result of 4 or higher on the evade dice, one successful hit from the attack is canceled.

- **Evade dice** refers to the dice rolled as part of the Evade reaction.

Example: The attacker has 2 successful hits against a defender. The defender rolls 3 evade dice. The results are 4, 4, and 1. The 2 evade dice that rolled a 4 each cancel out one of the attacker's successful hits. The evade die that rolled a 1 is disregarded.

Guard

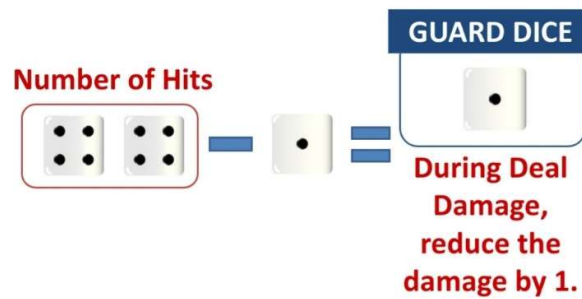

Guard is a reaction used to reduce the damage from an attack.

If your opponent asks for your reaction or is about to perform the attack action, follow these steps:

1. Declare the Guard reaction.
2. Place a Guard Reaction Card on the table.

After the attacker's attack dice are rolled and modified, the defender rolls a number of dice equal to the number of successful hits from the melee or shooting attack, minus one die. For each result of 4 or higher on the guard dice, one successful hit from the attack is canceled. Then, during the Deal Damage step, the defender cancels one additional point of damage.

- **Guard dice** refers to the dice rolled for the Guard reaction.

Example: The attacker has 2 successful hits against a defender, and the defender rolls only 1 Guard die. Since the result is less than 4, the defender fails to cancel any hits. As a result, the defender would normally take 2 damage. However, because the Guard reaction was declared, the total damage is reduced to 1 point.

Do Nothing

A unit can choose to do nothing as a reaction.

If your opponent asks for your reaction or is about to perform the attack action, follow these steps:

1. Declare the Do Nothing reaction.
2. Place a Do Nothing Reaction Card on the table.

After the attacker's attack dice are rolled and modified, the defender takes all successful hits from the attack.

ADVANCED REACTION

Whenever a unit is targeted by an attack, it has the opportunity to declare an advanced reaction. Unlike ordinary reactions, advanced reactions offer additional options for survival in battle.

- A unit can perform only one advanced reaction per attack action or situation.

The Unit can perform the following advanced reactions;

- **Perfect Evade**
- **Perfect Guard**
- **Intercept**
- **Parry**
- **Afterimages**
- **Weapon Sacrifice**

Perfect Evade

Perfect Evade is an advanced reaction. It can only be performed by units with ALT, DPH or UG tokens.

- Perfect Evade reaction can use for evading Explosive Tokens, Particle Beam Tokens, Nuclear Blast Tokens, and similar sources.

If your opponent asks for your reaction or is about to perform the Melee, Shooting, or Ramming attack action, follow these steps:

1. Declare the Perfect Evade reaction.
2. Place a Perfect Evade Reaction Card on the table.

After the attacker's attack dice are rolled and modified, the defender rolls 1 Perfect Evade die. If the result is 2 or less, the unit takes all successful hits from the attack. If the result is 3 or higher, the unit must remove one ALT, DPH, or UG token, and the attack fails.

- **Perfect Evade die** refers to the dice rolled as part of the Perfect Evade reaction.

Perfect Guard

Perfect Guard is an advanced reaction. It can only be performed by units with Shield Upgrade.

If your opponent asks for your reaction or is about to perform the attack action, follow these steps:

1. Declare the Perfect Guard reaction.
2. Place a Perfect Guard Reaction Card on the table.

After the attacker's attack dice have been rolled and modified, the defender must remove one Shield Upgrade to negate all damage from the attack. This includes damage from Explosive Tokens, Particle Beam Tokens, Nuclear Blast Tokens, and similar sources.

Intercept

Intercept is an advanced reaction that can only be performed by a unit within melee range of another friendly unit. If one of these units is targeted by the attacker's shooting attack and a reaction is requested, either unit can perform the Intercept reaction.

- Intercept action cannot be performed if the other friendly unit within melee range is engaged.

If your opponent asks for your reaction or is about to perform the attack action, follow these steps:

1. Declare the Intercept reaction.
2. Place an Intercept Reaction Card on the table.

After the attacker's attack dice are rolled and modified, the defender chooses another friendly unit as the interceptor, and this unit becomes the attacker's new target. The interceptor then performs a reaction.

Parry

Parry is an advanced reaction that can only be performed by a unit with melee weapon upgrade. This unit can only declare a Parry reaction against enemy units that perform a **charging attack action**.

- A **Parry reaction** cannot be performed if the unit is engaged with another unit that has the Unit Type (Keyword) of Mobile Suit or Mobile Fighter.

If your opponent asks for your reaction or is about to perform the charging attack action, follow these steps:

1. Declare the Parry reaction.
2. Place a Parry Reaction Card on the table.

When the attacker completes the movement of the charging attack action, before inflicting damage, the defender rolls 1 Parry die. If the result is 3 or less, the unit takes the damage inflicted by the charging attack action. If the result is 4 or higher, the unit does not take any damage.

Afterimages

Afterimages is an advanced reaction that can only be performed by a unit with the Afterimages Reaction. This unit can declare an Afterimages Reaction in response to a unit or weapon upgrade that is about to perform or while performing the instruction of the attack action.

- Afterimages Reaction can be declared while engaged with an enemy unit.

If your opponent asks for your reaction or is about to perform the attack action, follow these steps:

1. Declare the Afterimages reaction.
2. Place an Afterimages Reaction Card on the table.

After the attacker's attack dice are rolled and modified, the defender performs an Evade Reaction. After resolving the dealing damage step, move the defender up to 4 movement templates (MT).

After your opponent places an Explosive Token, Beam Particle Token, or Nuclear Blast Token, follow these steps:

1. Declare the Afterimages reaction.
2. Place an Afterimages Reaction Card on the table.

3. The defender rolls 1 Afterimages die. If the result is 3 or less, the defender does nothing. If the result is 4 or higher, the defender moves up to 4 movement templates (MT).
4. After the defender moves, the attacker continues with the instructions of the attack action.

Weapon Sacrifice

Weapon Sacrifice is an advanced reaction that can only be performed by a unit with Melee, Shooting or Remote Weapon upgrades.

- A **Weapon Sacrifice reaction** cannot be performed if the unit is engaged.

If your unit is about to take damage during the Deal Damage Step, follow these steps:

1. Declare the Weapon Sacrifice reaction.
 2. Place a Weapon Sacrifice Reaction Card on the table.
 3. Sacrifice one Melee, Shooting, or Remote Weapon of the unit to reduce the damage of any type equal to the HP of the weapon sacrificed.
- The unit can only sacrifice a Remote Weapon that is deployed on the battlefield and within its melee range.

PHASE 5: END PHASE

Once all units have been activated, the round is over. Remove all Plavsky particles, and end all activated abilities and/or ongoing effects.

If both players have at least one unit remaining on the battlefield, or if a player can still deploy units in the next deployment phase, proceed to the next round, starting with the Initiative Phase.

GLOSSARY

Altitude

Altitude refers to the vertical position of the unit above the horizon.

- An altitude of 0° means the unit is at the horizon level.
- An altitude of 90° means the unit is directly above the horizon.

Arctic

An Arctic is a type of terrain; each unit without an ALT token gets -1 movement template (MT).

Asteroids, Mountains, Large Buildings, Hills, Colony Parts, Ship Parts

These are large terrain pieces that block line of sight and provide cover.

- Each large terrain piece has an HP characteristic of 5.

Block Line of Sight

Blocking line of sight occurs when the attacker's view to the target is obstructed. This happens when the attacker's front arc is obscured by units or terrain pieces.

- If line of sight is blocked, the attacker cannot perform a shooting attack.

City

A city is a type of terrain, an urban or deserted area that includes buildings, trees, vehicles, and houses.

Cold Weather

Cold weather is a weather condition that affects units with a system.

- For each activation of the unit, the player must roll a D6. On a roll of 1, the unit cannot use the system's ability.

Cover

Units in cover gain 1 Guard die when using the Guard reaction.

Depth

Depth refers to the vertical position of a unit below the water surface.

- A depth of 0° means the unit is at or above the water surface.
- A depth of 90° means the unit is directly below the water surface.

Desert

A desert is a type of terrain where beam weapons are less accurate.

- All shooting attacks with Beam damage hit successfully on a roll of 5 or higher.

Dry Weather

Dry weather is a weather condition that affects terrain pieces, particularly trees.

- If a tree is destroyed, inflict 1 Fire damage to any unit within melee range of the destroyed tree before removing it.

Forest

A forest is a type of terrain characterized by a large number of trees or ruins.

Hot Weather

Hot weather is a weather condition that affects the Pilot Skill ability.

- For each activation of the unit, the player must roll a D6. On a roll of 3 or less, the unit cannot use its Pilot Skill ability.

Island

An island is a type of terrain where half of the battlefield surface is covered with water.

- Units with the Marine terrain type gain an additional 1 movement template when on the water surface.

Line of Sight

Line of sight is a straight line along which the attacker has unobstructed vision to the target.

- If any part of the target's base is visible, the attacker has line of sight.

Mountain

A mountain is a type of terrain characterized by the presence of mountains, trees, and hills.

Plains

Plains are a type of terrain that consists of an open field without any terrain pieces.

Rainy Weather

Rainy weather is a weather condition that affects the shooting accuracy of units and weapons.

- The successful hit roll for shooting attacks becomes 5 or higher.

Stormy Weather

Stormy weather is a weather condition that affects units with ALT token.

- It impacts the shooting accuracy of units and weapons. The successful hit roll for their shooting attacks becomes 5 or higher.
- It also affects the movement of units with ALT token, reducing their movement range by half.
- Weapon upgrades that can inflict Fire damage cannot be activated.

Snowy Weather

Snowy weather is a weather condition that affects Unit with ALT token.

- It impacts the shooting accuracy of units and weapons. The successful hit roll for their shooting attacks becomes 5 or higher.
- It also affects the movement of units with ALT token, reducing their movement range by half.
- Weapon upgrades that can inflict Fire damage cannot be activated.
- It affects units with a system. For each activation of the unit, the player must roll a D6. On a roll of 3 or less, the unit cannot use the system's ability.

Swamp

A swamp is a forested wetland. It is a type of terrain that has water. A unit with the Marine type can perform a Dive action in the water part of this terrain. If it surfaces, it can deploy anywhere in any watery part of the terrain.

Terrain Piece

Terrain pieces are objects on the table that hinder the movement of units and block line of sight. They create obstacles on the battlefield.

- Whether big or small, terrain pieces provide cover to units that are behind them and within melee range.
- Players can attack terrain pieces. If a terrain piece is destroyed, remove it from the table.

Total Damage Output

Total damage output means that, regardless of the number of dice rolled for an attack, the amount of damage dealt is fixed.

Transformation

This is a declared ability that requires the unit to be capable of transforming to another mode.

- The player does not need to replace the unit with its other transformation mode.

Trees, Debris, Ruins, Small buildings

These are small terrain pieces that cannot block line of sight but provides cover.

- Each small terrain piece has an HP characteristic of 1.

Unavoidable Damage

Unavoidable damage bypasses the steps involved in performing a melee or shooting attack, including Inquire Reactions, Performing Reactions, and Neutralize Results.

Certain conditions, such as those specified in special actions or upgrades, can deal unavoidable damage. Only abilities explicitly stated to ignore unavoidable damage can do so; otherwise, unavoidable damage is dealt directly to the unit's HP.

Underwater

Underwater is a type of terrain where the battle takes place beneath the sea.

- Units with the Marine terrain type gain an additional 1 movement template underwater.

- Units with the ALL or Marine terrain type can perform Move Actions, Ramming Attack Action, Charge Action, and Advanced Reaction underwater.
- During the aftermath, any units that took damage must roll a D6. On a roll of 1, they receive 1 Water damage.

Underground

Underground refers to the vertical position of a unit beneath the surface of the ground.
